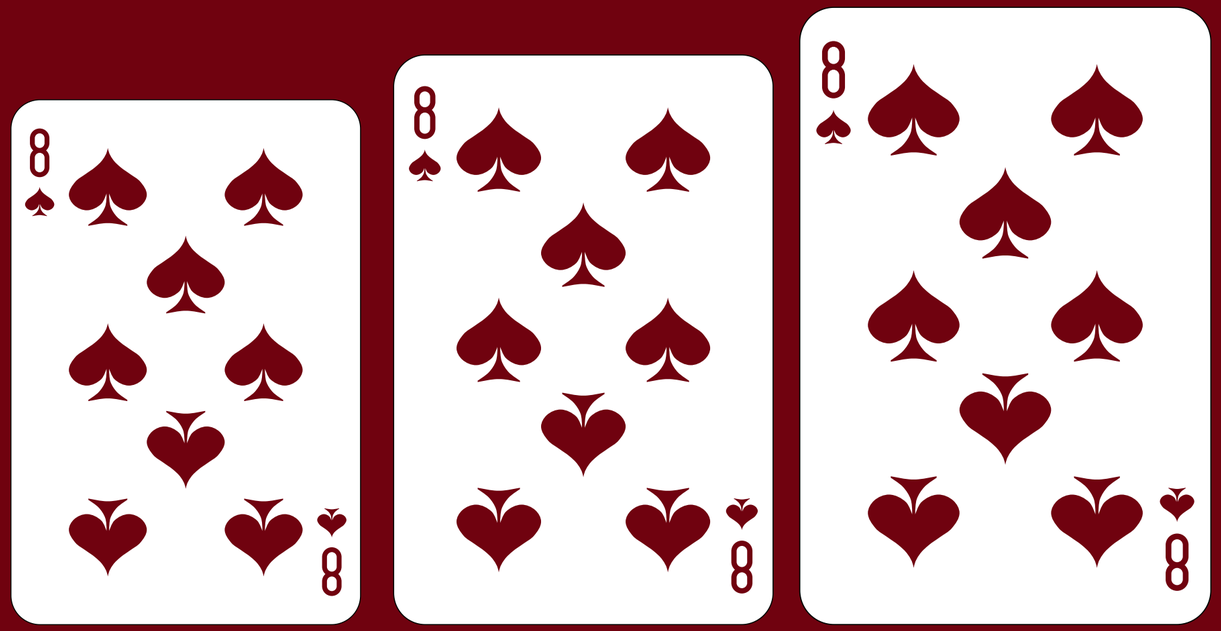
POINTS PLUS

PROBLEM

PLAYING THE REWARDS GAME WITHOUT A STRATEGY

- Travelers are underutilizing their reward points.
- Most redeem at ~1¢ per point, when they could get 2–5x more value through optimized strategies.
- As a result, users lose hundreds to thousands of dollars due to:
  - complex reward systems
  - fragmented points across platforms
  - lack of real-time, personalized guidance

OUR SOLUTION



PERSONALIZED TRAVEL OPTIMIZATION

Our platform analyzes a user's credit cards, airline loyalty programs, and travel goals to create customized recommendations for earning and redeeming points. By understanding each user's points balances and spending habits, the AI suggests the best credit cards to use for specific purchases and identifies the highest-value ways to transfer or redeem points for flights and hotel stays. Users can plan trips efficiently while maximizing the value of their rewards.

AI-POWERED POINTS MAXIMIZATION

Our platform analyzes a user's credit cards, airline loyalty programs, and travel goals to create customized recommendations for earning and redeeming points. By understanding each user's points balances and spending habits, the AI suggests the best credit cards to use for specific purchases and identifies the highest-value ways to transfer or redeem points for flights and hotel stays. Users can plan trips efficiently while maximizing the value of their rewards.

GOAL-BASED TRAVEL PLANNING

Users can set long-term travel goals, such as "I want to fly to Paris next summer," and the AI generates a step-by-step strategy to reach that goal. This includes recommendations for which credit cards to use for everyday spending, when to transfer points, and when to book flights. By combining personalized guidance with actionable steps, the platform turns complicated travel planning and rewards optimization into a simple, actionable process.

MARKET OPPORTUNITY

MASSIVE OPPORTUNITY IN LOYALTY AND REWARDS PROGRAMS

Airlines and credit card companies distribute billions of dollars in loyalty points each year through programs such as Delta SkyMiles, United MileagePlus, and American Airlines AAdvantage. However, these reward systems are often complex and difficult for the average traveler to navigate, leading many users to redeem points for low value or not use them at all. This creates a major opportunity for an AI-powered platform that helps travelers understand, optimize, and maximize the value of their rewards when booking travel.

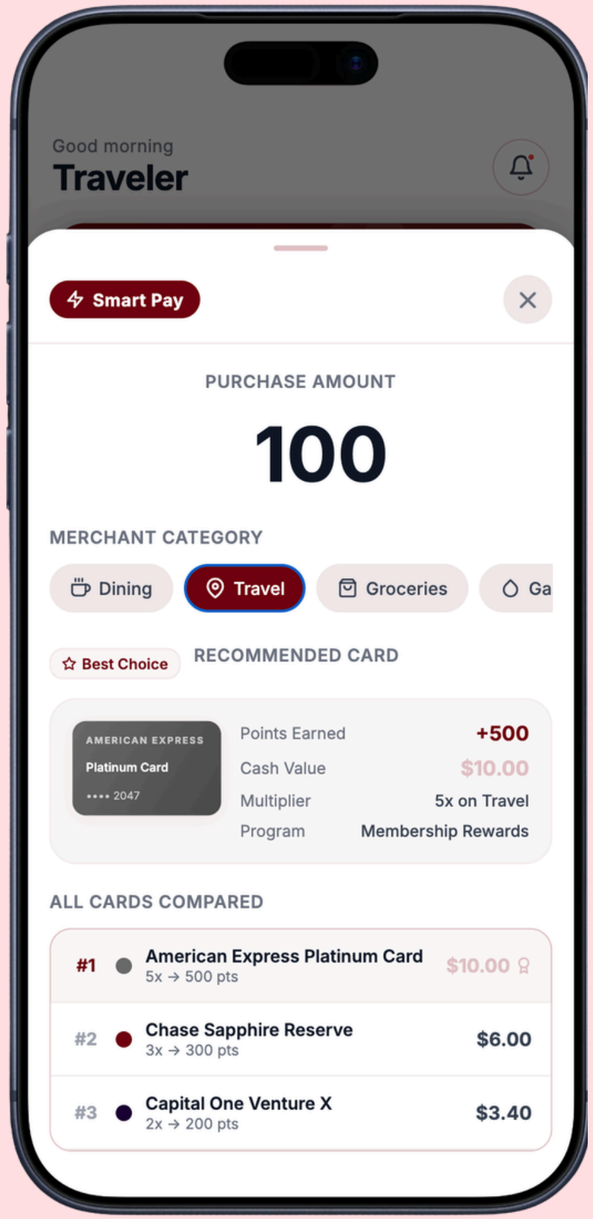
LARGE AND GROWING TRAVEL MARKET

The global travel industry continues to grow rapidly, generating trillions of dollars in annual spending as millions of people travel each year for both business and leisure. Major airports such as Hartsfield–Jackson Atlanta International Airport handle tens of millions of passengers annually, highlighting the scale of global air travel demand. As travel increases, more consumers are looking for tools that help them plan trips efficiently, find better deals, and reduce overall travel costs.

BUSINESS MODEL

SMART CARD SELECTION

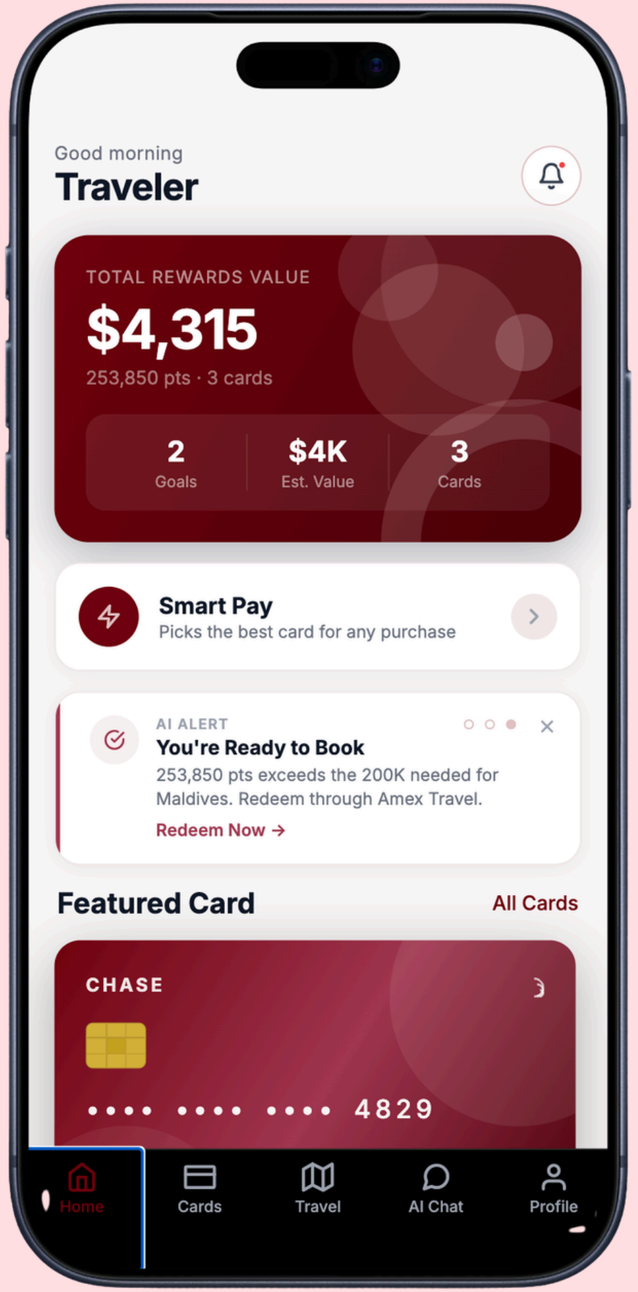
Add all your credit cards to the app and pay directly from within it. At checkout, the app automatically selects the card that maximizes your rewards, no manual decision-making needed.



BUSINESS MODEL

REWARDS DASHBOARD

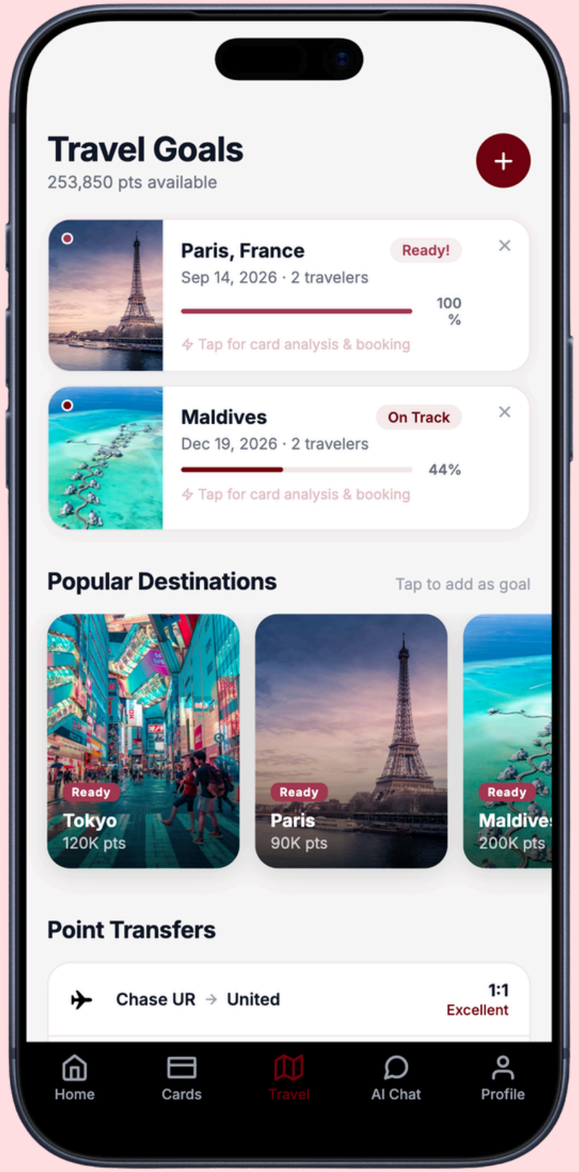
All points earned across your cards are consolidated in one place. Track your total accumulated rewards in real time, so you always know exactly where you stand.



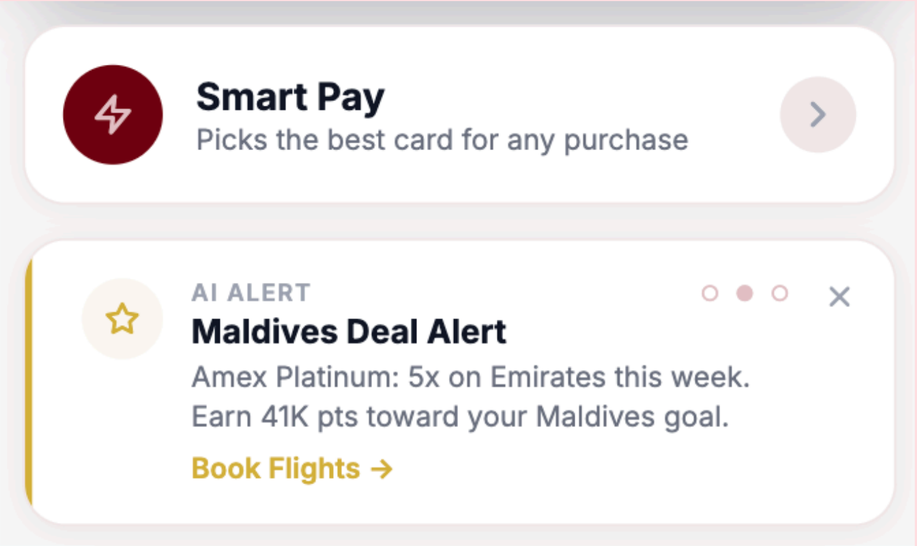
BUSINESS MODEL

TRIP GOAL TRACKER

Set a destination you're dreaming of — like Paris, France — and the app will show you how close your accumulated points are to covering that trip. Watch your progress update in real time as you earn more rewards with every purchase.



BUSINESS MODEL



AI ALERT NOTIFICATIONS

Our AI monitors price trends, reward values, and timing, then alerts users at the exact moment the odds are in their favor. Instead of guessing when to book, travelers are guided to make the smartest move at the right time.

COMPETITIVE LANDSCAPE

GAPS IN THE MARKET

Most existing solutions don’t combine AI, financial insights, and travel optimization. Travelers often struggle to know which credit card to use, which points to transfer, or how to get the best value per point. There is a clear opportunity to provide personalized, actionable recommendations that go beyond simple tracking or booking.

EXISTING TRAVEL PLATFORMS

The travel market already has several players like Expedia, Hopper, Rocket Money, and AwardWallet, which help users book trips or track rewards. While these platforms provide useful services, they mainly focus on flight searches, hotel bookings, or basic points tracking, without guiding users on how to maximize the value of their points.

OUR ADVANTAGE

Our platform stands out by offering AI-powered points optimization, goal-based travel planning, and value calculations that are easy to understand. Users not only see the best flights to book, but also which card to use and when to transfer points, maximizing their rewards and saving money. This combination of AI, personalization, and actionable insights is what differentiates us from the competition.

THANK YOU
